Wismar seaport introduces comprehensive Port Management Software

Latest INPLAN Software Technology offers powerful competitive advantages

Not only with the investment in logistics areas and quays but also with the introduction of a comprehensive port operation software the Wismar seaport extends its service around the economic logistics solutions for its customers and partners.

INPLAN software intelligently links all areas of operations and also creates value added for customers and external logistics partners. The port is convinced of the software advantages, Michael Kremp summarizes: *„By introducing the INPLAN solution, our excellent infrastructure, the port’s qualified staff and optimal handling equipment are getting a comprehensive state-of-the-art software solution. The operations are optimally supported and customers, agents, shipping lines or external partners with their logistics chains are depicted in the solution. This reinforces the increasingly important competitive factor of availability and use of data.“*

INPLAN builds with its standard software "INPLAN Port Operations and Port Management System" on the proven concept of a strong standard equipment being able to expand the solution by flexible use of modules for specific requirements. This allows upgrading the standard software as needed at any time.

Mohamad Itani, INPLAN CEO, is pleased about the new partner Port of Wismar: *„Only weeks ago the INPLAN Solutions achieved the highest global recognition of the world's leading association for the Port Industry IAPH (International Association of Ports and Harbors). The IT Award in Gold was awarded to the Port of Beirut for the introduction of INPLAN Port Operations and Port Management Software. The order by the Port of Wismar reconfirms the system's operating strength and performance.“*

INPLAN and Port of Wismar will work in joint project teams to make the system ready for use in the coming months.

On Wismar seaport:

Seehafen Wismar GmbH is the owner of the infrastructure and operates the port activities at the site.

Efficient multi-purpose terminals offer a wide range of port-specific services. Project cargo, general and bulk cargo is handled at the terminals. The service profile is complemented by warehousing and further port-specific services.
